CHILDREN'S BIRD COUNT

In 2019 we had the first approach with children. We gave them a speech about birds, and how to identify them. That day we took a short walk through our community's park to teach children how to count birds.

In December 2020 we carried out the first child bird count with the participation of 15 children from Caño Negro, Upala, Sarapiquí and San Carlos. We managed to count 33 species of birds. If you wish to contribute with this program, you can indicate it in an email and add it to the invoice of the reserved services.

CAÑO NEGRO'S BIRD COUNT

The bird count of Caño Negro is done once a year in the month of December with the aim of obtaining valuable information on the bird species that visit the refuge. 2020 was our first year as partners in this great program.

WASTE COLLECTION CAMPAIGN

Our community is very clean; however, the river brings waste from the upper basin, for this reason several private companies, and forest rangers joined us to carry out waste collection periodically within the wetland.

WORLD WETLANDS DAY

Held on February 2, we arranged with SINAC (forest ranger) and other organizations to make this day a complete celebration and promote wetland conservation through cultural and recreational activities.

The last celebration was held in 2020.
